IMPROVEMENT OF VISUAL AIDS FOR AIR NAVIGATION

Progress Report
March 1, 1954 to June 30, 1954

Prepared by
F. C. Breckenridge

Sponsored by
Airways Engineering Division
Civil Aeronautics Administration

U. S. DEPARTMENT OF COMMERCE NATIONAL BUREAU OF STANDARDS

The publication, reproduction, or use of this report is prohibited unless permission is obtained from the National Institute of Standards and Technology, Gaithersburg, D. C. Such permission may be obtained by writing to the Director, National Institute of Standards and Technology, Gaithersburg, D. C. 20899.

Approved for public release by the Director of the National Institute of Standards and Technology (NIST) on October 9, 2015

In part, is prohibited reproduction, distribution, or use for any purpose other than that specified in the report for its own use.

IMPROVEMENT OF VISUAL AIDS FOR AIR NAVIGATION
PROGRESS REPORT

1. OBJECTIVES

It is the purpose of this project to carry on research and testing, develop specialized equipment and provide technical services for the Airways Engineering Division of the Office of Federal Airways, Civil Aeronautics Administration.

2. TESTING

At the beginning of the period covered by this report, there were two tests in progress. These have been completed and reported. During the report period six additional tests have been requested. Five of these have been carried thru and reported. Detailed dates and costs for each test are given in the financial summary.

3. RESEARCH ACTIVITIES

3.1 Study of exposure characteristics of metal protective paints.

The accelerated exposures of the 28 paint specimens have been completed and a report on this part of the project has been started. It is anticipated that the results will be found sufficiently definite to warrant the discontinuance of this part of the test. The natural exposures should be continued for the coming fiscal year but this will entail little expense except for a report at the close of the year.

3.2 Study of green plastics for beacon covers.

The results of the measurements made in the previous period have been computed and analyzed and diagrams have been prepared to show how the signal colors produced by the plastics with light sources of different color temperatures compare with the specification tolerances. The final report on this project is nearing completion.

3.3 Study of optical system for traffic control projectors.

During the previous period candlepower distribution measurements were made for a considerable number of lamp, reflector, and lens combinations. This material was organized into a report covering the characteristics of the projector originally submitted for test, possible modifications of that projector to improve its performance, and the alternative of a design using a very light weight plastic lens. The work was then discontinued because developments within the C.A.A. made it impossible to utilize the results in the foreseeable future.

SECTION 1

It is the purpose of this report to present a summary of the results of the study conducted by the Army Research Office (ARO) in the area of the development of a new type of tank. The study was conducted in the area of the development of a new type of tank, and the results are presented in this report.

SECTION 2

The first part of the study was a review of the literature on the subject of the development of a new type of tank. This review was conducted in order to determine the current state of the art in this field. The results of this review are presented in the following sections.

SECTION 3

3.1 Development of a New Type of Tank

The first part of this section is a review of the literature on the subject of the development of a new type of tank. This review was conducted in order to determine the current state of the art in this field. The results of this review are presented in the following sections.

3.2 Study of Army Research Office

The second part of this section is a study of the Army Research Office (ARO). This study was conducted in order to determine the current state of the art in this field. The results of this study are presented in the following sections.

3.3 Study of Army Research Office

The third part of this section is a study of the Army Research Office (ARO). This study was conducted in order to determine the current state of the art in this field. The results of this study are presented in the following sections.

3.4 Standardization of signal-light colors.

Diagrams were prepared to illustrate the text of Part 1 of the proposed standard for signal light colors and a conference arranged with representatives of the Kopp Glass Co. and the Corning Glass Works. Some criticisms were offered to the text but they were of a tentative sort and need not preclude the use of this draft for wider circulation. The diagrams proved inadequate and new diagrams are in process of preparation. This is a joint project with the Bureau of Aeronautics, that bureau carrying the major part of the cost.

3.5 Technical services.

This item includes correspondence, conferences, administrative reports and other general activities incident to the conduct of the project. The costs for this period include the expenses involved in preparing the progress report for the previous period.

Financial Summary, March 1, 1954 to June 30, 1954

C.A.A. Fund 13341330.001

N.B.S. Project 0201-30-2328

Balance 2-28-54 (see last report)	\$1626
Supplementary transfer	<u>600</u>
Funds available for period	\$2226

Cost of tests

<u>Test No.</u>	<u>Date of Request</u>	<u>Date of Report</u>	<u>Current Costs</u>
-----------------	------------------------	-----------------------	----------------------

General testing

G15248	----	3-31-54	\$39.
--------	------	---------	-------

Two fused rubber-covered connectors, tested electrically and mechanically for conformity to specifications and suitability for intended service.

G15259	3-23-54	4-13-54	70.
--------	---------	---------	-----

Radio antenna housing, measured for loss tangent.

G15426	4-12-54	4-21-54	35.
--------	---------	---------	-----

Paint, tested for conformity to specifications.

G15505	5-7-54	5-12-54	127.50
--------	--------	---------	--------

Three portable A-C and D-C thermal voltmeters calibrated.

Project Tests

21A-10-53	11-16-53	3-12-54	155.
-----------	----------	---------	------

15 portable approach-light photometers calibrated, furnished with calibration charts, and shipped.

Research Activities

Study of exposure characteristics of metal protective paints.	\$550.
Study of green plastics for beacon covers.	310.
Study of optical system for traffic control projectors.	216.
Standardization of specifications for signal colors.	198.
Technical services.	<u>650.13</u>

\$2350.63

Final deficit 124.63
